AI SOVEREIGNTY & GLOBAL GO-TO-MARKET

PRD — Regulatory Modularity, Cultural Localization & Gray-Market Pricing Defense

Enterprise Generative AI • EU • US • Southeast Asia

Product Strategy | Version 1.0 | 08 October 2026

1. Executive Summary

This PRD defines a global operating model for launching one enterprise Generative AI product across the EU, US and Southeast Asia without creating country-specific product forks. The strategic premise is simple: keep the intelligence layer globally standardized, while externalizing regulatory, cultural and commercial differences into versioned policy and experience layers.

- Regulatory modularity: policy API evaluates region, contract, use case and risk context.
- Cultural localization: UX, trust signals and sales motion are adapted by buyer archetype.
- Margin protection: PPP-adjusted pricing is paired with entitlement and SLA controls.
- Operational scalability: regional variation is represented as configuration, policy or content.
- Strategic outcome: turn fragmentation into a reusable platform capability.

2. Regulatory Architecture — Modular by Design

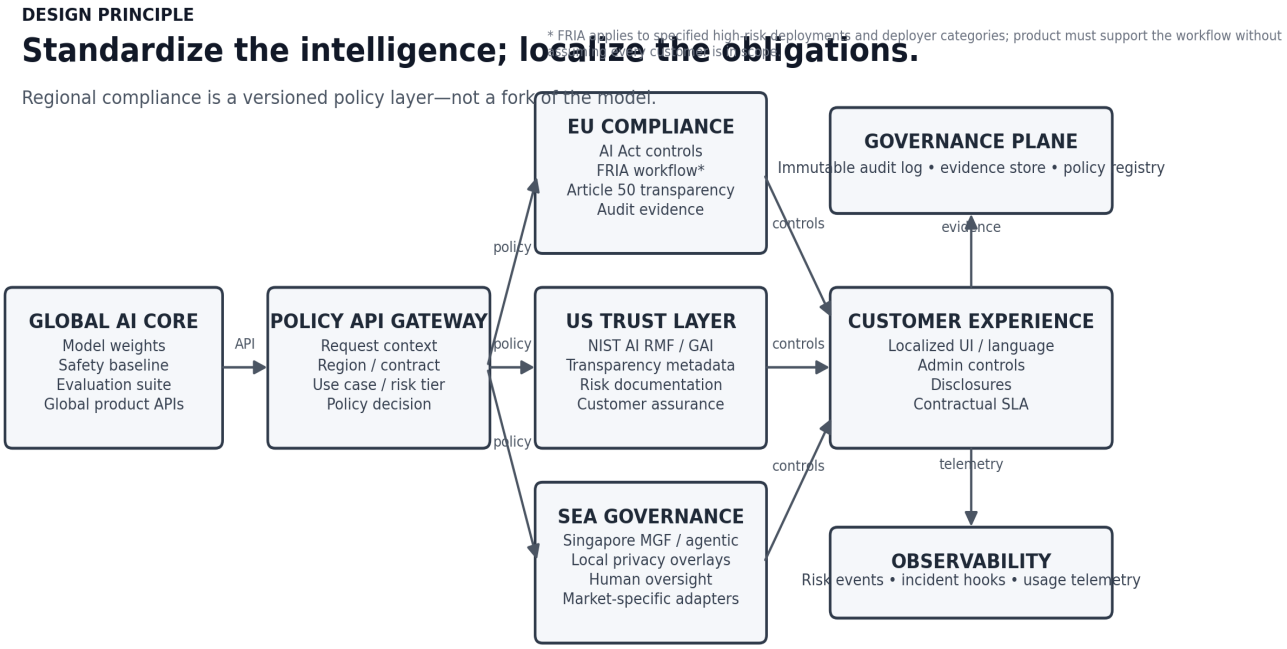

Figure 1. Standardized intelligence with regional policy adapters.

The architecture treats compliance as an execution layer. Policy decisions are versioned, testable, effective-dated and auditable.

Regional baseline

Region	Anchor	Product implication
EU	EU AI Act	Article 50 transparency; specified FRIA workflow; evidence generation.
US	NIST AI RMF + GenAI Profile	Risk documentation, transparency, evaluation and governance evidence.
SEA	Singapore IMDA governance frameworks + country overlays	Human oversight, transparency, governance and local legal adapters.

3. Cross-Cultural GTM Localization Matrix

Market	Cultural signal	UI / UX	Sales motion
EU enterprise	Institutional trust; regulated-sector uncertainty sensitivity	Explainability, data controls, audit trail, precise claims	Compliance/security-led, longer procurement, evidence pack
US enterprise	Low power distance; individualistic; outcome-oriented	Fast value discovery, ROI, benchmarks, configurable workflows	Champion-led, rapid pilots, executive ROI

Market	Cultural signal	UI / UX	Sales motion
Singapore hub	Governance-oriented; high institutional trust	Role controls, human approval, explicit boundaries	Executive sponsorship + governance review
Indonesia/Malaysia	Higher hierarchy/relationship orientation	Guided onboarding, localized support, admin-led setup	Relationship-led + local partner credibility
Thailand/Vietnam	Hierarchy and relationship can influence buying	Guided workflows, localized help	Partner-assisted PoV + consultative close
Philippines	Business English + relationship/service orientation	English-first, localized examples/support	Reference-led, service-oriented

4. Gray-Market Pricing Defense

Recommended formula: Regional Price = Global Reference Price × PPP Index × Segment Multiplier × Contract Discount. The floor is set by contribution margin and service cost; the ceiling by willingness-to-pay and competition.

Layer	Mechanism	Purpose
Feature fencing	Regional entitlement bundles	Protect premium differentiation
SLA geo-locking	Contracted service geography	Prevent discounted-market contracts from buying premium-region economics
Org-level licensing	Legal entity + tenant + contract	Avoid fragile IP-only enforcement
Cross-border exception	Travel does not change entitlement	Protect legitimate multinational users
Abuse detection	Anomaly scoring + review	Detect resale without brittle blocking

5. Roadmap, KPIs & Risks

Release	Scope	Exit criterion
R0	Policy schema, entitlements, audit plane	Architecture + policy CI approved
R1	Global launch controls	P0 controls pass; pilots complete assurance
R2	EU FRIA workflow + evidence APIs	Customer compliance teams self-serve
R3	PPP corridors + anomaly detection	Leakage below threshold; low false positives
R4	Adapter toolkit	New market without core model fork

Key KPIs

Metric	Target
Policy reuse	≥80% controls reused across regions
Core model forks	0 for regulatory localization
Enterprise conversion	+10–20% relative lift after localization
Policy change lead time	<14 days after approved legal interpretation
Gray-market leakage	<1% ARR
False-positive geo enforcement	<0.2% active enterprise tenants

6. Executive Recommendation

Fund the product as a global platform with three explicit planes: Intelligence, Policy and Commercial Experience. Do not create EU/US/SEA product branches. Make jurisdiction, customer contract and use case first-class inputs to policy execution. Each new jurisdiction should become an adapter and evidence package—not a new product.
